Allowable Subject Matter

Claims 1-15 are allowable over prior art of record.

The following is an examiner's statement of reasons for allowance; the prior art does not teach:

“ A liquid crystal display device, including domain restriction structure for restricting so that a liquid crystal is provided between a pixel electrode and a counter electrode to which voltage is applied, and an alignment of the liquid crystal is substantially vertical when non-voltage is applied, substantially parallel when a predetermined voltage is applied, and inclined when a smaller voltage than the predetermined voltage is applied, and further a direction that the alignment of the liquid crystal is inclined is set to be a plurality of parts in each pixel when a voltage smaller than the predetermined voltage is applied, further comprising: a drive circuit in which when the pixel is changed from a first transmittance to a second transmittance greater than the first transmittance, a voltage greater than a first target drive voltage corresponding to the second transmittance is applied on a pixel electrode in a first period of changing to the second transmittance, and the first target display voltage is applied in a second period after the first period. None of the reference in combination or singularly teach the feature of this claimed application (drive circuit). The closest prior art is Takeda et al. (US Pat. No. 6,661,488 B1).

Takeda teaches the limitations of independent claims without disclosing a drive circuit with above limitations.
